

ABC
COMPANIES

- (Contact Limitation & Eradication of Airborne Noxious Systems)
- 3 layers of passenger and driver protection
- Includes new & pre-owned coach and service offers

ABC “CLEANS” Products & Services

Interior sanitization/disinfection

HVAC purification systems

Contact partitions & passenger hygiene

Interior sanitization/disinfection

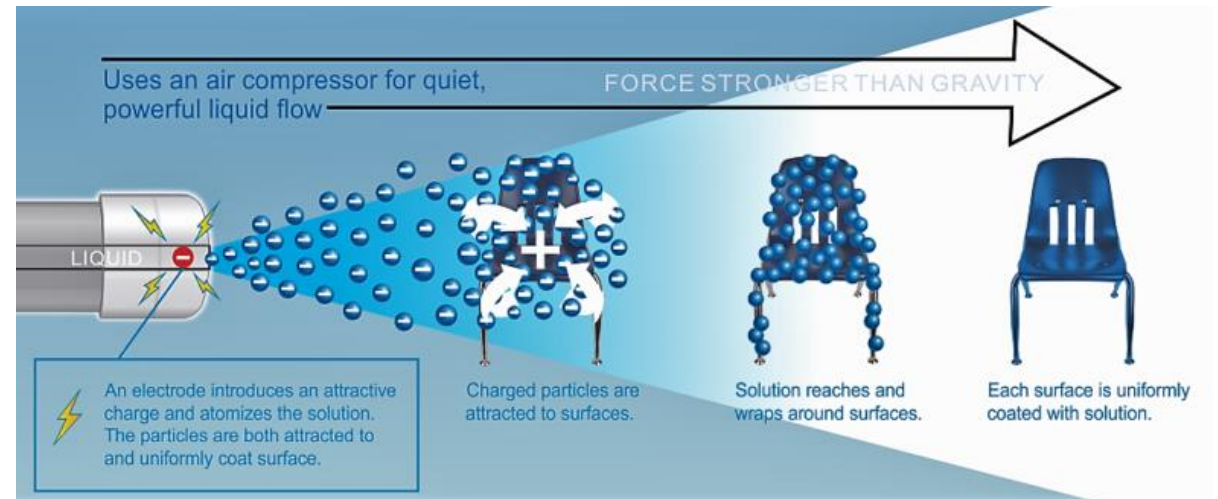

Electrostatic fogging of coach interior

- 99.994% Reduction in Virus Control including the Human Coronavirus
- EPA approved water soluble disinfectant also used in commercial airlines
- Solution is electrically charged allowing uniform coating and “wraparound” distribution on surfaces
- Services conducted by ABC on site or at customer location

Available: May/June

Cost: 45' / 35' / Double Deck

HVAC purification systems

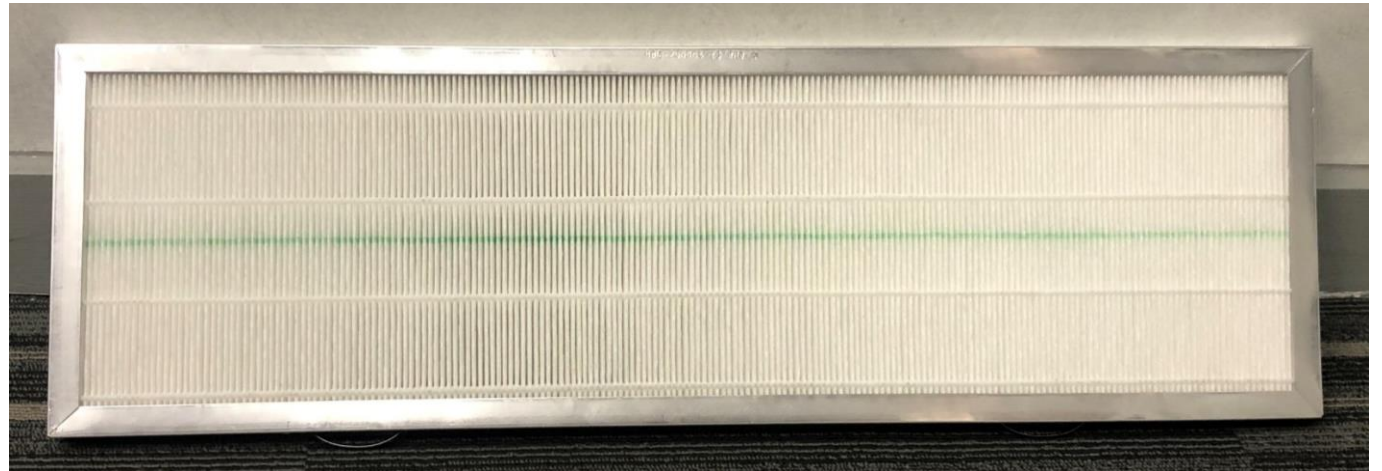

Upgraded cabin filter system, MERV 13 (new and retro)

- Reduces cabin particulates by 90% between 1 and 5 microns and smaller
- Can be installed in existing systems

Cost: \$260 (to be replaced every 3 months)

Available: 4-6 week delivery

HVAC purification systems

Factory HEPA filtration

- Captures 99.9% of Particles (bacteria, fungi and larger viruses or virus clumps)

Cost: Priced per coach configuration at time of sale

Available: Factory order

HVAC purification systems

UV light HVAC disinfection system (new and retro)

- Eliminates 90% of microbial contaminants after 10 minutes of exposure and 99% after 1 hour
- Reduces maintenance of HVAC system components
- Can be installed in existing systems

Cost: \$2,399 installed / \$1631 parts only (before taxes and fees)

Available: Sold out-/ 6-8 weeks delivery (back orders being taken and prioritized)

Inactivation (sterilization) rates after 18000 hours

Microorganism	Single Pass		
	Minimum	Average	LOG Average
Coronavirus	78.33%	97.55%	1
Tuberculosis	57.88%	87.72%	0
Influenza A virus	38.21%	68.89%	0
Smallpox	46.19%	77.76%	0

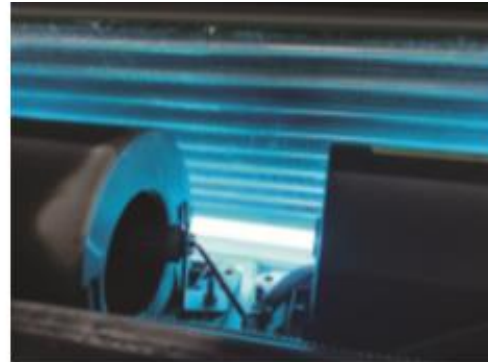

HVAC purification systems

How UV Light Works

UV-C light produced by the Fresh-Aire UV System penetrates the cell walls of micro-organisms causing cellular damage, which kills them by preventing them from reproducing.

Simplified Maintenance

When UV-C lights are properly installed they can eliminate the need for coil and drain pan cleaning. Maintenance personnel are no longer exposed to disinfectants and other cleaning chemicals required for these tasks. Use of UV-C lights can result in a 99 percent reduction of the concentration of germs on irradiated surfaces within the A/C system.

Advanced Power Supply

Our 24-30 VDC power supply utilizes a high frequency electronic ballast design for stable lamp operation and increased lamp life. The power supply is compact and easily mounts in the tight confines of the A/C Cabinet.

Teflon® Coated, Water-Resistant Lamps

The UV lamps are safety-coated with a Teflon® sleeve. They are water-resistant for mounting in wet locations such as the coil and drain pan. These TUVC-246 UV-C lamps incorporate a durable shielded design that provides longer lamp life in all conditions.

Coil with mold
