## How UV Light Works

UV-C light produced by the Fresh-Aire UV System penetrates the cell walls of micro-organisms causing cellular damage, which kills them by preventing them from reproducing.

## Simplified Maintenance

When UV-C lights are properly installed they can eliminate the need for coil and drain pan cleaning. Maintenance personnel are no longer exposed to disinfectants and other cleaning chemicals required for these tasks. Use of UV-C lights can result in a 99 percent reduction of the concentration of germs on irradiated surfaces within the A/C system.

## Advanced Power Supply

Our 24-30 VDC power supply utilizes a high frequency electronic ballast design for stable lamp operation and increased lamp life. The power supply is compact and easily mounts in the tight confines of the A/C Cabinet.

## Teflon® Coated, Water-Resistant Lamps

The UV lamps are safety-coated with a Teflon® sleeve. They are water-resistant for mounting in wet locations such as the coil and drain pan. These TUV-C-246 UV-C lamps incorporate a durable shielded design that provides longer lamp life in all conditions.

## Factory HEPA filtration
